The Oklahoma Library of Digital Resources is an innovative initiative to provide Oklahoma educators with high-quality, interactive teaching resources.

We appreciate our sponsors:
Thank you to the following educators for their work in curating digital resources:

Anne Beck, OSSBA
Andrea Brock, Moore Public Schools
Traci Brownen, Weatherford Public Schools
Amy Bruner, Broken Arrow Public Schools
Julie Copeland, Merritt Public Schools
Lauren Duke, Putnam City Public Schools
Paula Dyer, Putnam City Public Schools
Tonya Gaunt, Clinton Public Schools
Becky King, Woodward Public Schools
Julia Nail, Woodward Public Schools
Sarah Peffer, Merritt Public Schools
Kendra Rakes, Bartlesville Public Schools
Tawn Rundle, Merritt Public Schools
Heather Sparks, Mid-Del Public Schools
Laura Splawn, Merritt Public Schools
Taler Broadbent, Merritt Public Schools
Robyn Wright, Sand Springs Public Schools
### Getting To Know OKLDR

- Who is OSSBA? 4
- Why OKLDR? 5
- How To Use This Book 6
- Moving Forward 7

### Numbers and Operations

- Whole Numbers Up to 100,000 10
- Multi-Digit Whole Numbers 12
- Understand fractions 15
- Determine Value Set of Coins or Bills 17

### Algebraic Reasoning and Algebra

- Numerical and Geometric patterns 20
- Use Number Sentences 22

### Geometry and Measurement

- Use Geometric Attributes 25
- Understand Measurable Attributes 27
- Solve Problems by Telling Time 30

### Data and Probability

- Summarize, Construct and Analyze Data 33

### Resources

- Teacher 36
- Student 37

3rd Grade Mathematics
GETTING TO KNOW OKLDR
WHO IS OSSBA?

The Oklahoma State School Boards Association (OSSBA) works to promote quality public education for the children of Oklahoma through training and information services to school board members. The Association is a leader among leaders in Oklahoma education and a visible presence in the local school districts and throughout the state.

The OSSBA was created in 1944 to provide support for local school board members with a variety of information, assistance, and representation services. OSSBA reaches every school board member through training opportunities. It creates and encouraged effective leaders to promote public education and cultivates productive alliances with governing bodies. OSSBA trains school board members to participate in an effective and supportive manner to provide direction for educational innovation and improves public perception of education in Oklahoma by sharing strategies and tools with our member school districts to focus on the success of Oklahoma public education.

OSSBA works with school boards to demonstrate the impact they have on student achievement. We work to provide meaningful two-way communication of advocacy, services, and training activities to local boards of education and their stakeholders. Other services we provide that have a direct impact on student achievement include strategic planning and superintendent searches. Our legal team provides free legal information to the school districts.
WHY OKLDR?

In the summer of 2016, OSSBA set out on a journey assist teachers in the integration of technology into their classrooms. The Oklahoma Library of Digital Resources (OKLDR) became a collection of digital content resources selected by Oklahoma educators to support the Oklahoma Academic Standards. The resources were curated by teachers from school districts across Oklahoma. Each collection contained a variety of learning resources, such as videos, apps, pdf documents, and websites, and are designed so that teachers can then build their lesson plans. The resources helped bridge the digital equity gap among students while helping schools make the most of limited resources.

After collaborating with educators, school and district leaders for a couple of years, OKLDR has been enhanced in the following ways:

- Resources are now an Open Education Resource (OER) “book” format, making it easier to use and accessible on multiple devices.
- Resources map to ESSA expectations for evidence of student understanding and students’ mastery of the academic standards.
- Tools are now agnostic and can be used on multiple devices.
- Lessons are now focused on student engagement through the use of technology. The first OKLDR version focused on teacher resources. This is a major change.
- To prioritize student learning, teacher resources are now located at the back of each book.
HOW TO USE THIS BOOK

The Oklahoma Academic Standards for this lesson are grouped together by key topics. Sometimes you will see only one standard, but other times you will see a grouping of standards.

Evidence of Understanding is the key. This is the concept you want your students to master that reinforces the standards. Mastery means deeper understanding, not just “skim the surface” learning.

Digital Tools are the recommended applications and/or tools for the lesson. Think of this element as the “supplies box.”

In Practice is a suggested activity to engage the students to demonstrate mastery of the standard. You will notice that this is just one suggested lesson, and sometimes there might be a second lesson. The suggested lesson, developed by Oklahoma teachers, is meant to give you a starting point. You might decide to use the lesson or it might give you an idea of something else you could do to teach the concept.
As you can see the OKLDR book has been designed to inspire educators to have students demonstrate their understanding of the Oklahoma Academic Standards through the use of technology as a productivity tool. While educators have limited time in the day to plan and research high quality content, this book is a jumping off point, with suggested peer-reviewed activities and resources.

While you might encounter extra white space in the book, it is intentional for growth. As you integrate the activities into your lessons, you are encouraged to send us student work samples that might be included in the book, as well as additional activities and resources that could be included in future revisions.

Next Steps:

• We would love to add samples of student work to the activities, so please send the work to: okldr@ossba.org.

• If you would like to be involved in future course creation, or know teachers who would like to be involved, please contact us at: okldr@ossba.org.

• See anything that needs to be changed or enhanced? Contact us at: okldr@ossba.org.
NUMBERS AND OPERATIONS
WHOLE NUMBERS UP TO 100,000

3.N.1.1 Read, write, discuss, and represent whole numbers up to 100,000. Representations may include numerals, expressions with operations, words, pictures, number lines, and manipulatives.

3.N.1.2 Use place value to describe whole numbers between 1,000 and 100,000 in terms of ten thousands, thousands, hundreds, tens and ones, including expanded form.

3.N.1.3 Find 1,000 more or 1,000 less than a given four- or five-digit number. Find 100 more or 100 less than a given four- or five-digit number.

3.N.1.4 Use place value to compare and order whole numbers up to 100,000, using comparative language, numbers, and symbols.

Evidence of Understanding

Students will be able write, draw, and represent place value of numbers and compare numbers using symbols with a digital tool.
Digital Tools

• Whiteboard Application Educreations, Whiteboard: Absolute Board, Show Me, Google Jamboard, Explain Everything

• Video - YouTube - Place Value, Khan Academy - Place Value and Rounding

In Practice

• Students will use drawing application to recreate numbers in place value, comparing numbers, and ordering numbers.

• Students will use a video application to record themselves demonstrating a number line they created with 6 numbers given by the teacher.

• Students will explain how they ordered the numbers in the video for understanding.

• Students will use a whiteboard application and web browsing (or teacher assigns cities with populations) to locate populations of certain cities and label the place value of the numbers.
3. N. 2. 1 Represent multiplication facts by using a variety of approaches, such as repeated addition, equal-sized groups, arrays, area models, equal jumps on a number line and skip counting.

3. N. 2. 2 Demonstrate fluency of multiplication facts with factors up to 10.

3. N. 2. 3 Use strategies and algorithms based on knowledge of place value and equality to fluently add and subtract multi-digit numbers.

3. N. 2. 4 Recognize when to round numbers and apply understanding to round numbers to the nearest ten thousand, thousand, hundred, and ten and use compatible numbers to estimate sums and differences.

3. N. 2. 5 Use addition and subtraction to solve real-world and mathematical problems involving whole numbers. Use various strategies, including the relationship between addition and subtraction, the use of technology, and the context of the problem to assess the reasonableness of results.

3. N. 2. 6 Represent division facts by using a variety of approaches, such as repeated subtraction, equal sharing and forming equal groups.

3. N. 2. 7 Recognize the relationship between multiplication and division to represent and solve real-world problems.

3. N. 2. 8 Use strategies and algorithms based on knowledge of place value, equality and properties of addition and multiplication to multiply a two-digit number by a one-digit number.
Evidence of Understanding

Students will be able to solve real-world problems using addition and subtraction; and describe the relationship/connection between multiplication and division.

Digital Tools

- Video Editor- Clips, WeVideo, Flipgrid, iMovie, Loom,
- Content Application- Math Learn Game 3rd Grade Learning
In Practice

• Students will use a content application to practice standard.

• Students will plan a class party. Each student will be given an item and create fair sharing.

• Students will use a video editor to create a visual example of their fair sharing example.
UNDERSTAND FRACTIONS

3.N.3.1 Read and write fractions with words and symbols.

3.N.3.2 Construct fractions using length, set, and area models.

3.N.3.3 Recognize unit fractions and use them to compose and decompose fractions related to the same whole. Use the numerator to describe the number of parts and the denominator to describe the number of partitions.

3.N.3.4 Use models and number lines to order and compare fractions that are related to the same whole.

Evidence of Understanding

Students will be able to write and compare fractions using words, pictures, and symbols, as well as construct fractions using length, set, and area models.
**Digital Tools**

- Camera
- Content Application - Fractions Math Learning center
- Content Application - Number Line Learning Center

**In Practice**

- Students will use the Fractions app to practice composing and decomposing fractions.
- Students will practice recognizing fractions on a number line using Number Line application.
- Students will use the Camera application to take a picture of an object and use a markup tool to divide the object into fractions.
3.N.4.1 Use addition to determine the value of a collection of coins up to one dollar using the cent symbol and a collection of bills up to twenty dollars.

3.N.4.2 Select the fewest number of coins for a given amount of money up to one dollar.

Evidence of Understanding

Students will be able to add a collection of coins up to a dollar and a collection of bills up to twenty dollars using a digital tool.
Digital Tools

- *Photo Collage* - PicCollage, Google Photo Collage
- Word Processor - Pages, Google Docs, Microsoft Word.
- Resources - Money Prodigy, Counting Money

In Practice

- Students will practice adding money coins up to twenty dollars using the Money application.
- Student will label prices on at least 5 different digital objects. Students will use a photo collage to create itemized prices and a word processor to create a receipt with a total of $20.
ALGEBRAIC REASONING AND ALGEBRA
NUMERICAL AND GEOMETRIC PATTERNS

3.A.1.1 Create, describe, and extend patterns involving addition, subtraction, or multiplication to solve problems in a variety of contexts.

3.A.1.2 Describe the rule (single operation) for a pattern from an input/output table or function machine involving addition, subtraction, or multiplication.

3.A.1.3 Explore and develop visual representations of growing geometric patterns and construct the next steps.

Evidence of Understanding

Students will be able to create, describe, and extend patterns involving addition, subtraction, or multiplication to solve problems using a spreadsheet.
Digital Tools

- **Content Application** - Sheppard Software - Fruit Shoot Skip Count
- **Word Processor** - Pages, Google Docs, Microsoft Word.

In Practice

- Students will evaluate understanding of solving addition, subtraction, multiplication problems using the link Sheppard Software - Fruit Shoot Skip Count.
- Students will use a word processor to apply their knowledge and understanding of an input/output table by creating their own.
- Students will create their own numbers and operation to apply their understanding using a word processor app.
USE NUMBER SENTENCES

3.A.2.1 Find unknowns represented by symbols in arithmetic problems by solving one-step open sentences (equations) and other problems involving addition, subtraction, and multiplication. Generate real-world situations to represent number sentences.

3.A.2.2 Recognize, represent and apply the number properties (commutative, identity, and associative properties of addition and multiplication) using models and manipulatives to solve problems.

Evidence of Understanding

Students will be able to recognize, represent, and apply number properties by creating and using models and manipulative to solve problems.
Digital Tools

• Video Editor- Clips, WeVideo, Flipgrid, iMovie, Loom, Majisto

In Practice

• Students will demonstrate their knowledge of real world number property by using candy or manipulatives in a small group and record their demonstrations and descriptions of the properties using a video editor.
GEOMETRY AND MEASUREMENT
USE GEOMETRIC ATTRIBUTES

3.GM.1.1 Sort three-dimensional shapes based on attributes.
3.GM.1.2 Build a three-dimensional figure using unit cubes when picture/shape is shown.
3.GM.1.3 Classify angles as acute, right, obtuse, and straight.

Evidence of Understanding
Students will be able to classify angles, sort three-dimensional shapes using the markup tool or a whiteboard application.
Digital Tools

- Whiteboard Application- Educreations, Whiteboard: Absolute Board, Show Me, Google Jamboard, Explain Everything
- Digital Camera

In Practice

- Students will locate and take pictures of 2D and 3D objects and classify them based on their attributes using the markup tool whiteboard application.
- They will take pictures of different angles and edit the picture by drawing and describing the angle on the picture using the markup tool.
UNDERSTAND MEASURABLE ATTRIBUTES

3.GM.2.1 Find perimeter of polygon, given whole number lengths of the sides, in real-world and mathematical situations.

3.GM.2.2 Develop and use formulas to determine the area of rectangles. Justify why length and width are multiplied to find the area of a rectangle by breaking the rectangle into one unit by one unit squares and viewing these as grouped into rows and columns.

3.GM.2.3 Choose an appropriate measurement instrument and measure the length of objects to the nearest whole centimeter or meter.

3.GM.2.4 Choose an appropriate measurement instrument and measure the length of objects to the nearest whole yard, whole foot, or half inch.

3.GM.2.5 Using common benchmarks, estimate the lengths (customary and metric) of a variety of objects.

3.GM.2.6 Use an analog thermometer to determine temperature to the nearest degree in Fahrenheit and Celsius.

3.GM.2.7 Count cubes systematically to identify number of cubes needed to pack the whole or half of a three-dimensional structure.

3.GM.2.8 Find the area of two-dimensional figures by counting total number of same size unit squares that fill the shape without gaps or overlaps.
Evidence of Understanding

Students will be able to demonstrate an understanding how to find perimeter of polygons using a whiteboard application or video editor.

Digital Tools

- Video Editor: Clips, WeVideo, Flipgrid, iMovie, Loom, PowerDirector, Majisto
- Whiteboard Application: Educreations, Whiteboard: Absolute Board, Show Me, Google Jamboard, Explain Everything
In Practice

- Students will use a whiteboard application or use a video editor to create a how to slideshow on how to find perimeter and area of polygons.
- Students will use a video editor to video themselves throughout the classroom or school to find objects that they can estimate the lengths, using centimeters, inches, feet, and yard.
SOLVE PROBLEMS BY TELLING TIME

3.GM.3.1 Read and write time to the nearest 5-minute (analog and digital).

3.GM.3.2 Determine the solutions to problems involving addition and subtraction of time in intervals of 5 minutes, up to one hour, using pictorial models, number line diagrams, or other tools.

Evidence of Understanding

Students will be able to use a Video Editor to demonstrate how to write time to the nearest 5-minutes.

Students will be able to use a Word Processing tool to create pictorial models, number line diagrams, and other tools to calculate solutions to addition and subtraction problems involving time using intervals of 5 minutes.
Digital Tools

- Video Editor- Clips, WeVideo, Flipgrid, iMovie, Loom, Majisto
- Comic Maker- iFunFace, ChatterPixPowtoonFlipaclip, Animatic

In Practice

- Students will use a video editor to find clocks (digital and analog) around the school and read what time it is currently showing, and predict what time it will be in 5 minutes, or up to an hour later.
- Students will create a comic strip of five important times of their day using analog clocks.
DATA AND PROBABILITY
SUMMARIZE, CONSTRUCT AND ANALYZE DATA

3.D.1.1 Summarize and construct a data set with multiple categories using a frequency table, line plot, pictograph, and/or bar graph with scaled intervals.

3.D.1.2 Solve one- and two-step problems using categorical data represented with a frequency table, pictograph, or bar graph with scaled intervals.

Evidence of Understanding

Students will be able to create a data set with multiple categories using frequency table, line plot, pictograph, and/or a bar graph by using a spreadsheet application.
Digital Tools

- Word Processor - Pages, Google Docs, Microsoft Word.
- Polling Application - Plickers, Poll Everywhere

In Practice

- Students will gather data within their class using a polling application
- Students will use a word processor to create a table and/or graph of different preferences of food, toys, sports, etc. of their class or grade.
